COVID-19 Global Flight Tracker - Updated Through Tuesday March 31

Tracking Daily Airline Activity by Airport

We are measuring daily departures out of the 50 largest global airports to gauge the impact of COVID-19 on airline activity around the world. Our data is current as of Tuesday, March 31 and is not adjusted for typical seasonality. Our data reflects daily departures, not actual traffic.

China departures led the way down in late January, taking roughly a month to bottom at down ~80%. We estimate that the decline in Europe departures followed China by roughly six weeks, with departures now down ~85%, while N America departures turned lower one to two weeks after Europe and are now down 50-60%. By country India and UAE (Dubai) departures are near zero while it appears Italy and S Korea could be bottoming
