## Global Aerospace

# COVID-19 Global Flight Tracker - Updated Through Sunday March 22

### Tracking Daily Airline Activity by Airport

**We are measuring daily departures out of the 50 largest global airports** to gauge the impact of COVID-19 on airline activity around the world. Our data is current as of Sunday, March 22 and is not adjusted for typical seasonality. Our data reflects daily departures, not actual traffic.

China departures led the way down in late January, taking roughly a month to bottom at down ~80%. We estimate that the decline in Europe departures followed China by roughly six weeks and they are now down ~65% while N America departures have now turned lower one to two weeks after Europe and are down ~30%.
