U.S. Government/Credit Index

Overview

The U.S. Government/Credit Index is the non-securitized component of the U.S. Aggregate Index and was the first macro index launched by Lehman Brothers. The U.S. Government/Credit Index includes Treasuries (i.e., public obligations of the U.S. Treasury that have remaining maturities of more than one year), Government-Related issues (i.e., agency, sovereign, supranational, and local authority debt), and USD Corporates. The U.S. Government/Credit Index was launched on January 1, 1979, with index history backfilled to 1973, and is a subset of the U.S. Aggregate Index.

Pricing and Related Issues

Source and Frequency

All index-eligible bonds are priced on a daily basis, predominantly by Lehman Brothers traders. By sector, the source of security level pricing is as follows:

- Treasury: Priced by Lehman Brothers traders on a daily basis.
- Government-Related: A subset of approximately 200 liquid Agency debentures are priced by Lehman Brothers traders on a daily basis, with the remaining bonds model priced using trader marks and updated curves. All bonds are trader priced at mid month and month end.
- Corporate: All bonds are marked by traders at mid month and month end. Up to 1,000 actively traded benchmark corporate securities continue to be priced by traders on a daily basis. Less liquid bonds are model/ matrix priced daily using these actively traded benchmark securities to generate issuer pricing curves and populate a spread matrix algorithm that accounts for changes in the yield and swap curves.

Pricing Quotes

Bonds can be quoted in a variety of ways including nominal spreads over benchmark securities/treasuries, spreads over swap curves, or direct price quotes as a percentage of par. In most instances the quote type used is a spread measure that results in daily security price changes from the movement of the underlying curve (swap or treasury) and/or changes in the quoted spread.

Timing

3:00 pm (New York time) each day. If the last business day of the month is a public holiday in the U.S. market, prices from the previous business day are used.

Bid or Offer Side

Bonds in the index are priced on the bid side. The initial price for new corporate issues entering the index is the offer side; after that, the bid side price is used.

Settlement Assumptions

Verification

T+1 settlement basis for all bonds

Multi-contributor verification: The primary price for each security is analyzed and compared to other third-party pricing sources through both statistical routines and scrutiny by the research staff. Significant discrepancies are researched and corrected, as necessary. On occasion, index users may also challenge price levels, which are then reviewed by the pricing team. Prices are then updated as needed using input from the trading desk.

Global Family of Indices

Rules for Inclusion		
LICE 250 million minimum par amount outstanding		
USD 250 million minimum par amount outstanding.		
Must be rated investment grade (Baa3/BBB-/BBB- or above) using the middle rating of Moody's, S&P, and Fitch, respectively.		
 When all three agencies rate an issue, a median or "two out of three" rating is used to determine index eligibility by dropping the highest and lowest rating. 		
 When a rating from only two agencies is available, the lower ("most conservative") of the two is used. When a rating from only one agency is available, that rating is used to determine index eligibility. 		
 At least 1 year until final maturity, regardless of optionality. For securities with coupons that convert from fixed to floating-rate, at least 1 year until the conversion date. 		
 Perpetual securities are included in the index provided they are callable or their coupons switch from fixed to variable rate. These are included until one year before their first call date, providing they meet all other index criteria. 		
Senior and subordinated issues are included.		
Fixed-rate. Step-up coupons and coupons that change according to a predetermined schedule are also included. Capita securities with coupons that convert from fixed to floating-rate are index-eligible, given that they are currently fixed-rate; the maturity date then equals the conversion date. Fixed-to-floating rate perpetual capital securities that do not have coupon rate step-ups on their first call date will remain index eligible for their fixed-rate term provided that they meet all other index inclusion rules and exit the index one year prior to their conversion to floating coupon securities (refer to Global Capital Securities Index Fact Sheet).		
Denominated in USD		
SEC-registered, fully taxable issues. SEC Rule 144A securities with Registration Rights are included; a security with bound SEC Regulation S and SEC Rule 144A tranches is treated as one security. To prevent double-counting, we include the 144A tranche and exclude the Reg-S tranche; Issues with global market of issue are included.		
Included: ◆ Fixed-rate bullet, puttable and callable bonds and sinking funds ◆ Original issue zero coupon and underwritten MTN ◆ Certificates of Deposit (as of 1/1/2006) ◆ SEC Rule 144A with registration rights and Regulation S securities ◆ Fixed-rate and fixed to floating capital securities Excluded: ◆ Bonds with equity-type features (e.g., warrants, convertibility to equity) ◆ Private placements ◆ Floating-rate issues ◆ Structured notes with embedded swaps ◆ STRIPS, TIPS, T-Bills, and Bellwethers		
Rebalancing Rules		
The composition of the Returns Universe is rebalanced monthly at each month end and represents the set of bonds on which index returns are calculated. The Statistics Universe changes daily to reflect issues dropping out and entering the index, but is not used for return calculation. On the last business day of the month, the composition of the latest Statistics Universe becomes the Returns Universe for the following month.		
During the month, indicative changes to securities (maturity, credit rating change, sector reclassification, amount outstanding) are reflected in both the Statistics and Returns Universe of the index on a daily basis. These changes may cause bonds to enter or fall out of the Statistics Universe of the index on a daily basis, but will affect the composition of the Returns Universe only at month-end when the index is rebalanced.		
Interest and principal payments earned by the Returns Universe are held in the index without a reinvestment return unt month-end when it is removed from the index.		
Qualifying securities issued, but not necessarily settled, on or before the month-end rebalancing date qualify for inclusion in the following month's Returns Universe.		
Index History		
Fitch ratings added to Moody's and S&P to determine index eligibility.		
Sector re-classification into Treasury, Government-Related, Corporate, and Securitized.		
Liquidity constraint raised to USD 250 million from USD 200 million.		
Liquidity constraint raised to USD 200 million from USD 150 million. Started using the most conservative rating of Moody's and S&P to determine index eligibility instead of Moody's only for split-rated securities.		
Absorbed all Yankee Corporates into their respective industry and sector classification.		
Liquidity constraint raised to USD 150 million from USD 100 million.		
Removed U.S. TIPS from the index.		
Liquidity constraint raised to USD 100 million from USD 50 million for non-government securities.		
Liquidity constraint increased to USD 50 million from USD 25 million for non-government securities.		
Liquidity constraint raised to USD 100 million from USD 25 million for government securities.		
Liquidity constraint raised to USD 25 million from USD 1 million. U.S. Government/Credit Index introduced, with historical data backfilled to 1973.
